

What does PCD stand for?

Pitch circle diameter

The term PCD is often used when specifying the correct wheel trims or wheel nut safety products to fit a certain spacing of wheel nuts. The pitch circle diameter is simply the distance in mm from the centre of any one wheel nut across the middle of the wheel to the centre of the opposite wheel nut. The PCD measurement is NOT the space between the nuts.

The diagram below shows the measurement for a 10 stud 22.5" wheel. The same applies for all other wheel formats, 6 or 8 stud.
